В настоящее время ООО «Моно-плюс» занимает лидирующее место на рынке вспенивающего пенополистерола в Смоленской области. В ассортимент компании входит производство плит пенополистирольных для утепления зданий и сооружений, утеплителя для труб – «скорлупа», блоков несъемной опалубки для строительства домов. В 2017 году компания «Моно-плюс» открыла новое направление деятельности – производство элементов фасадного декора из пенополистирола.

Фасадный декор – индивидуальность в каждом доме

Строительство – важнейшее направление в жизни современного общества, а строительство собственного дома цель большинства людей. Основными критериями дома считаются – надежность, прочность, долговечность. Данные критерии характерны для любого строения, но есть одно качество, которым каждый стремится наделить свое жилище – неповторимый, индивидуальный внешний вид и красота собственного дома.

Для решения данной задачи существует много разных способов, мы предлагаем вашему вниманию новую технологию – изготовление декоративных элементов для украшения здания из вспенивающегося пенополистирола.

Фасадный декор из пенополистирола прочно вошел в моду и занял свое место в ряду декоративных элементов украшающих фасад здания. Материалы, из которых изготавливали элементы декора, менялись по мере развития общества. Сначала монолитные высеченные из каменной глыбы в древности, затем им на смену пришли накладные элементы из гипса. В современном мире для изготовления элементов декора исполь-

зуют пенополистирол. При использовании пенополистирола для украшения фасада здания можно значительно сократить расходы на строительство и сэкономить время на отделочных работах. Широкие возможности для дизайнеров по созданию эксклюзивных фасадов дает простота оформления и обработки пенополистирола, при этом изделие имеет выразительный вид.

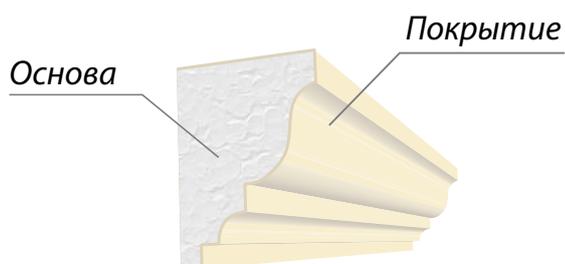

Основные преимущества

- ПРОЧНОСТЬ
- ДОЛГОВЕЧНОСТЬ
- ЭКОНОМИЧНОСТЬ
- ЛЕГКОСТЬ МАТЕРИАЛА
- ЭКСКЛЮЗИВНОСТЬ
- ЭКОЛОГИЧНОСТЬ

Компания ООО «Моно-плюс» предлагает Вам надежный и недорогой способ создания украшений фасада зданий, декоративные элементы способны передать индивидуальность, что важно для создания собственного стиля.

О материале

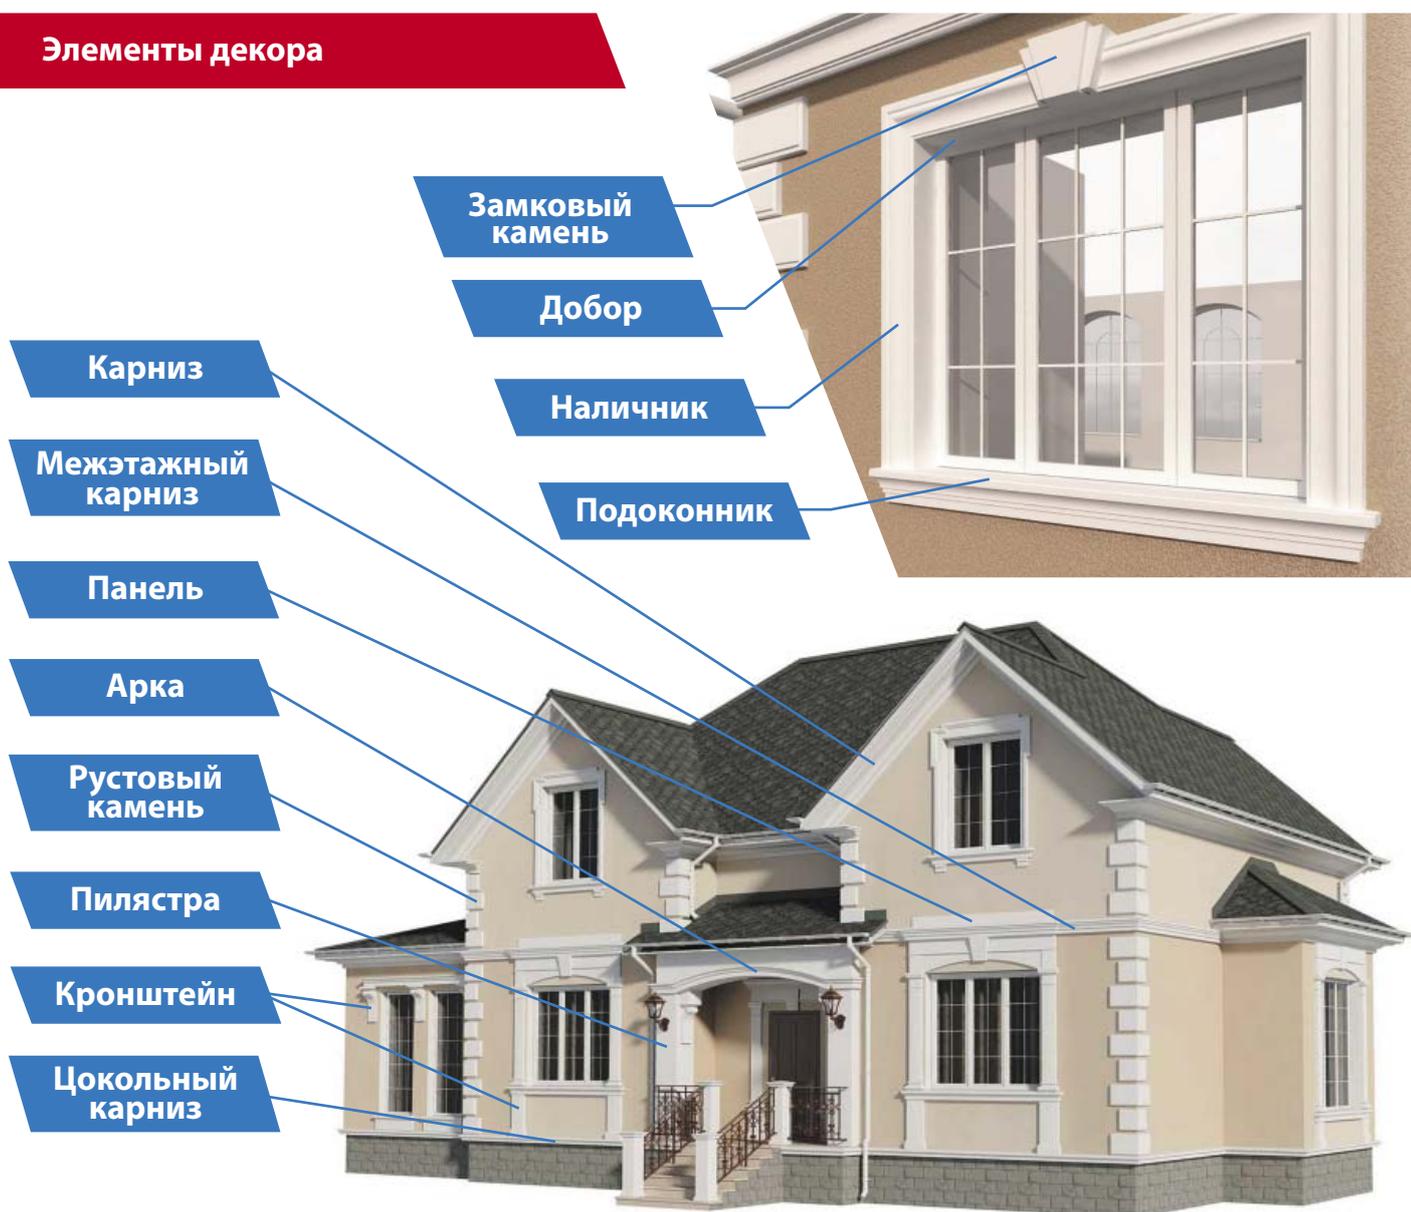

Основу элемента фасадного декора составляет вспененный пенополистирол (пенопласт). Его производят по ГОСТ 15588-2014, в производстве применяют марки ППС20-Р-А, ППС23-Р-А, ППС25-Р-А.

На пенопласт наносится покрытие – структурная штукатурка толщиной 2-3 мм.

Покрытие эластичное, способно «двигаться» вместе с пенопластом при температурных перепадах. Оно не трескается, не воспламеняется, является атмосферостойким, паропроницаемым, устойчиво к царапинам, не выделяет вредных для здоровья веществ.
